High-frequency repetitive transcranial magnetic stimulation accelerates and enhances the clinical response to antidepressants in major depression: a meta-analysis of randomized, double-blind, and sham-controlled trials

Berlim MT, Van den Eynde F, Daskalakis ZJ

Record Status
This is a systematic review that meets the criteria for inclusion on DARE.

Bibliographic details

PubMedID
23473357

DOI
10.4088/JCP.12r07996

Indexing Status
Subject indexing assigned by NLM

MeSH
Antidepressive Agents /therapeutic use; Clinical Trials as Topic; Combined Modality Therapy; Depressive Disorder, Major /drug therapy /therapy; Double-Blind Method; Humans; Odds Ratio; Randomized Controlled Trials as Topic; Transcranial Magnetic Stimulation /methods; Treatment Outcome

AccessionNumber
12013017203

Date bibliographic record published
31/05/2013
