A randomised 2x2 trial of community versus hospital pulmonary rehabilitation, followed by telephone or conventional follow-up

Waterhouse JC, Walters SJ, Oluboyede Y, Lawson RA

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors’ conclusions
Study found that pulmonary rehabilitation delivered in a community setting has similar efficacy to that offered in a more traditional hospital-based setting, and that the choice of model depends on local factors of convenience, existing availability of resources and incremental costs.
