A double-blind randomised placebo controlled trial of topical intranasal corticosteroids in 4- to 11-year-old children with persistent bilateral otitis media with effusion in primary care

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
To determine the clinical effectiveness and cost-effectiveness of topical mometasone in children with bilateral otitis media with effusion (OME).

Authors' conclusions
Study found that the use of topical intranasal corticosteroids is very unlikely to be a clinically effective treatment for otitis media with effusion in children in the primary care setting
