Time to full publication of studies of anti-cancer medicines for breast cancer, and the potential for publication bias: a short systematic review

Takeda A, Loveman E, Harris P, Hartwell D, Welch K

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' conclusions
Study found that the majority of RCTs of selected interventions for breast cancer had not reported the same outcome in both an abstract and a full publication, and that there was insufficient evidence to identify biases in terms of whether positive results were more likely to be fully published than non-significant ones.
