Multidisciplinary postacute rehabilitation for moderate to severe traumatic brain injury in adults

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
To determine the effectiveness and comparative effectiveness of multidisciplinary postacute rehabilitation for moderate to severe traumatic brain injury (TBI) in adults.

Authors' conclusions
The body of evidence is not informative regarding effectiveness or comparative effectiveness of multidisciplinary postacute rehabilitation. Further research should address methodological flaws common in these studies and further address effectiveness research questions.
