Record Status
This is a bibliographic record of a published health technology assessment. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
To evaluate the outcomes, particularly local recurrence, of 2 accelerated alternatives to conventional whole-breast radiotherapy after breast-conserving surgery (BCS): 1) accelerated, hypofractionated, whole-breast irradiation therapy; and 2) accelerated, partial-breast irradiation (APBI) therapy.
