Health technology reassessment and reinvestment: a systematic review of current practices
Leggett L, Zarrabi M, Sutherland L, Noseworthy T, Clement F

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' conclusions
Although there are many challenges associated with developing and implementing an HTRR process, the potential benefits are impressive. With little thorough research or documentation in the field, the knowledge foundation for developing an HTRR program is small. However, this field is worthy of research attention. As is apparent from the country case studies, a number of countries have taken an interest in the field. However, none have developed a model and completed the process start to finish. The availability of a comprehensive model that has been used in practice, and documented throughout, would be a significant addition to the field of HTRR.
