Randomised controlled trial of silk therapeutic garments for the management of atopic eczema in children: the CLOTHES trial

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
To assess the effectiveness and cost-effectiveness of silk garments for the management of AE in children with moderate to severe disease.

Authors' conclusions
The addition of silk garments to standard AE care is unlikely to improve AE severity, or to be cost-effective compared with standard care alone, for children with moderate or severe AE. This trial adds to the evidence base to guide clinical decision-making.

Indexing Status
Subject indexing assigned by CRD

MeSH
Child; Clothing; Dermatitis, Atopic; Disease Management; Humans; Silk

Language Published
English

Country of organisation
England
