Exercise lowers postprandial glucose but not fasting glucose in type 2 diabetes: a meta-analyses of studies using continuous glucose monitoring

Macleod SF, Terada T, Chahal BS, Boule NG

Record Status
This is a systematic review that meets the criteria for inclusion on DARE.

Bibliographic details
Macleod SF, Terada T, Chahal BS, Boule NG. Exercise lowers postprandial glucose but not fasting glucose in type 2 diabetes: a meta-analyses of studies using continuous glucose monitoring. Diabetes/Metabolism Research and Reviews 2013; 29(8): 593-603

PubMedID
24038928

DOI
10.1002/dmrr.2461

Indexing Status
Subject indexing assigned by NLM

MeSH
Blood Glucose /metabolism; Diabetes Mellitus, Type 2 /physiopathology; Exercise /physiology; Fasting /physiology; Hemoglobin A, Glycosylated /analysis; Humans; Monitoring, Ambulatory; Postprandial Period /physiology

AccessionNumber
12013055602

Date bibliographic record published
30/09/2013
