Earlier initialization of highly active antiretroviral therapy is associated with long-term survival and is cost-effective: findings from a deterministic model of a 10-year Ugandan cohort

Mills FP, Ford N, Nachega JB, Bansback N, Nosyk B, Yaya S, Mills EJ

Record Status
This is an economic evaluation that meets the criteria for inclusion on NHS EED.

Bibliographic details

DOI
10.1097/QAI.0b013e318265df06

Indexing Status
Subject indexing assigned by NLM

MeSH
Antiretroviral Therapy, Highly Active /economics /methods; CD4 Lymphocyte Count; Cohort Studies; Cost-Benefit Analysis; Drug Costs; HIV Infections /drug therapy /economics /mortality; Humans; Models, Economic; Uganda /epidemiology

AccessionNumber
22013033929

Date bibliographic record published
19/09/2013
