Fetal telemonitoring (FTM)

Pazart L H, Durieux P

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
To determine the efficacy and safety of FTM based on a decreased hospital admission rate for a quality of surveillance identical to that achieved in hospital.

Authors' conclusions
FTM raises problems of quality of transmission, confidentiality and questions concerning the sharing of responsibilities between the patient and nursing staff. The widespread use of FTM cannot be considered without prior evaluation of its efficacy and safety according to a clinical experimental protocol combined with economic analysis. Other output or dissemination activity: Not covered by health insurers.
