Heart surgery and interventional cardiology for adults
Health Council of the Netherlands: Committee on Cardiac Surgery and Interventional Cardiology

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
On request of the State Secretary of Health, Welfare and Cultural Affairs to inform him about the state of science and its implications for practice, in preparation for a Planning Decree under section 18 of the Hospital Provision Act for tertiary referral centers.

Authors' conclusions
Number of procedures (The Netherlands, 15.5 million inhabitants): At least 13,500 open heart operations and 11,900 angioplasties by the year 2000. Requirements: The application of section 18 of the Hospital Provision Act should be continued. Each hospital should perform a minimum of 750 heart operations a year by having five cardiac surgeons, each of whom carries out at least 150 interventions a year. Each hospital should perform a minimum of 500 interventions a year by having five interventional cardiologists, each of whom carries out at least 100 interventions a year. A center cannot perform interventional cardiology without heart surgery and vice versa. Each center must participate in a uniform registration system.

Other output or dissemination activity: Update report: expected in 2000; Acceptance of recommendations: The report has been accepted by the Minister of Health, Welfare and Sport to serve as the basis of a new Planning Decree under section 18 of the Hospital Provision Act for tertiary referral centers. Changes to practice: The ambition of some hospitals to offer PTCA without facilities for open heart surgery, will not be realised.
