Evaluation of a telepsychiatry pilot project
Doze S, Simpson J

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
Pilot project linking Alberta Hospital Ponoka and five general hospitals to evaluate feasibility and usefulness of telepsychiatry services in central Alberta.

Authors' conclusions
Information gathered during this evaluation suggests that the use of video conferencing equipment for psychiatric consultations should be considered when planning for an integrated community-based mental health service. In addition, the use of video conferencing technology should be considered for other mental health applications.
