Use of implantable cardioverter-defibrillators for prevention of sudden death in patients at high risk for ventricular arrhythmia

BlueCross BlueShield Association

Record Status
This is a bibliographic record of a published health technology assessment. No evaluation of the quality of this assessment has been made for the HTA database.

The BlueCross BlueShield Association Technology Evaluation Center website (www.bcbs.com/tec) includes the most recent 3 years of TEC Assessments. To request older reports, please use the “contact us” feature on the website.

Citation

Authors' objectives
The objective of this Assessment is to evaluate the outcomes of using an implantable cardioverter-defibrillator (ICD) to prevent morbidity and mortality associated with ventricular tachyarrhythmia (VT).
