Lower limb deep vein valve reconstruction for chronic deep venous incompetence

National Institute for Health and Clinical Excellence

Record Status
This is a bibliographic record of a published health technology assessment. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
This guidance aims to assess the current evidence on lower limb deep vein valve reconstruction for chronic deep venous incompetence.

Authors' conclusions

1 Guidance

1.1 Current evidence on the safety and efficacy of lower limb deep vein valve reconstruction for chronic deep venous incompetence does not appear adequate for this procedure to be used without special arrangements for consent and for audit or research.

1.2 Clinicians wishing to use lower limb deep vein valve reconstruction for chronic deep venous incompetence should take the following actions. : Inform the clinical governance leads in their Trusts. : Ensure that patients understand the uncertainty about the procedure's safety and efficacy and provide them with clear written information. In addition, use of the Institute's information for patients ('Understanding NICE guidance') is recommended (available from www.nice.org.uk/IPG219publicinfo). : Audit and review clinical outcomes of all patients having lower limb deep vein valve reconstruction for chronic deep venous incompetence.

1.3 Further research on the procedure would be useful. The Institute may review the procedure upon publication of further evidence.
