Processes in recruitment to randomised controlled trials of medicines for children (RECRUIT): a qualitative study

Shilling V, Williamson PR, Hickey H, Sowden E, Smyth RL, Young B

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' conclusions
Study found that during trial discussions parents and young people said little, but later described them positively. The concerns of some practitioners that asking about research would overburden families were unfounded, and parents did not object to being asked. Generally, it was felt that written information on trials could be shorter and more straightforward.
