Metylnaltrexon ved forstoppelse i kreftbehandling [Methylnaltrexone for opioid-induced constipation in cancer treatment]
Movik E, Ringerike T, Linnestad KK, Hofmann, B, Harboe I, Klemp M

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' conclusions
Our review suggests that methylnaltrexone was more effective than placebo in terms of time to laxation. From an ethical point of view methylnaltrexone may contribute to help a vulnerable patient group and professionals in everyday care. Our health economic model nevertheless does not provide us with the grounds to conclude that the drug is cost-effective.
