Provision of information to patients with long term conditions

Macpherson K, Abbotts J, Harbour J, Mandava L

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' conclusions
Despite an extensive and comprehensive literature search very little literature was identified to answer any of the specific questions posed. For the conditions studied, there was little evidence available on the impact of patient information on clinical outcomes. More evidence was available on behavioural and patient-focused outcomes, as well as outcomes relating to healthcare utilisation.
