Minimal-invasiver perkutaner aortenklappenersatz/TAVI [Percutaneous aortic valve replacement with a side note to hybrid operating rooms]

Gottardi R, Wild C

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' conclusions
The available evidence suggests that TAVI is more effective and safer than standard therapy (medicinal therapy) only under certain conditions, but new studies and independent registries will probably have an important influence on the estimated effect. Due to its rapid dissemination, the controlled introduction of TAVI accompanied by mandatory documentation as well as a re-evaluation of this intervention is thus proposed.
