General guidelines for assessing, approving and introducing new procedures into a hospital or health service

Australian Safety and Efficacy Register of New Interventional Procedures - Surgical

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
To provide general guidance to hospitals and health services about the assessment of new surgical procedures and the factors that should be considered prior to their introduction. A new surgical procedure is defined as one that has not previously been used in that hospital or health service, and that represents a significant departure from previous practice.

Authors' conclusions
The present and future role of ASERNIP-S in the evaluation and registry of new procedures and the identification of newly emerging and evolving techniques is discussed.

A list of other relevant organisations and their web-sites is provided.
