Laatupainotetut elinvuodet terveydenhuollon vaikuttavuuden arvioinnissa: jarjestelmallinen kirjallisuuskatsaus [Use of quality-adjusted life years for the estimation of effectiveness of health care: a systematic literature review]

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
The aim of this review was to identify, in a systematic literature review, published studies having used quality-adjusted life years (QALYs) based on actual measurements of patients' health-related quality of life (HRQoL), and to determine which HRQoL instruments have been used to calculate QALYs. Furthermore, to characterise studies with regard to medical speciality, intervention studies, results obtained, quality, country of origin, QALY gain observed, and interpretation of results regarding cost-effectiveness.

Authors' conclusions
Although QALYs are considered an important measure of effectiveness of health care, the number of studies in which QALYs are based on actual measurements of patients' HRQoL is still fairly limited.
