Clinical efficacy, safety, and costs of percutaneous occlusive balloon catheter-assisted ureteroscopic lithotripsy for large impacted proximal ureteral calculi: a prospective, randomized study

Record Status
This is an economic evaluation that meets the criteria for inclusion on NHS EED.

Bibliographic details

PubMedID
24786613

DOI
10.1089/end.2014.0167

Indexing Status
Subject indexing assigned by NLM

MeSH
Adult; Analysis of Variance; Balloon Occlusion /methods; Chi-Square Distribution; Costs and Cost Analysis; Female; Hematuria /etiology; Humans; Length of Stay /economics; Lithotripsy /adverse effects /economics /instrumentation /methods; Male; Middle Aged; Nephrostomy, Percutaneous /adverse effects /economics /methods; Operative Time; Prospective Studies; Safety; Treatment Outcome; Ultrasonography, Doppler, Color; Ureteral Calculi /pathology /surgery /ultrastructure; Ureteroscopes; Ureteroscopy /methods; Urinary Catheters

AccessionNumber
22014036745

Date bibliographic record published
01/12/2014
