Menetelmien arviointi hoitotyossa - Kansallisen ja kansainvalisen tutkimuksen systemoitu kirjallisuuskatsaus Technology assessment in nursing: a systematic review of the national and international literature
Partanen P, Perala M L

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
The aims of this study are to clarify what technology assessment means in the context of nursing, and to identify and describe the research evaluating various methods (technologies) used in nursing.

Authors' conclusions
On the basis of this review it seems that in Finland, evaluation research on nursing methods is scarce, but there exists international meta-analytical research, as well as primary studies evaluating the effects of nursing methods. People working in research positions need to take systematic action in order to strengthen the technology assessment research in nursing. Recommendations for future research activities and for the utilization of the existing research base in nursing is presented in this report.
