High-dose lymphoablative therapy (HDLT) with or without stem-cell rescue for treatment of severe autoimmune diseases
BlueCross BlueShield Association

Record Status
This is a bibliographic record of a published health technology assessment. No evaluation of the quality of this assessment has been made for the HTA database.

The BlueCross BlueShield Association Technology Evaluation Center website (www.bcbs.com/tec) includes the most recent 3 years of TEC Assessments. To request older reports, please use the “contact us” feature on the website.

Citation

Authors' objectives
This Assessment summarizes published evidence from pilot studies and phase I/II trials of high-dose lymphoablative therapy with or without autologous stem-cell rescue for the treatment of severe autoimmune disease to determine the procedures effect on health outcomes.
