Developing and testing methods for deriving preference-based measures of health from condition-specific measures (and other patient-based measures of outcome)

Brazier JE, Rowen D, Mavranezouli I, Tsuchiya A, Young T, Yang Y, Barkham M, Ibbotson R

Record Status
This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' conclusions
Report finds that condition-specific preference-based measures of health can have an important role in ensuring that the benefits of health-care interventions are properly reflected in quality-adjusted-life-year estimates for economic evaluation for all patient groups when generic measures are not sensitive to potentially important differences.
