## Sensory-based treatments for autism spectrum disorders

---

### Record Status

This is a bibliographic record of a published health technology assessment. No evaluation of the quality of this assessment has been made for the HTA database.

### Citation

Sensory-based treatments for autism spectrum disorders. Lansdale: HAYES, Inc.. Directory Publication. 2011

### Authors' conclusions

Sensory-based interventions for individuals diagnosed with autism spectrum disorder (ASD) and pervasive developmental disorder (PDD) are designed to improve abnormalities in sensory processing and sensory integration that are prevalent in these complex disorders, and ultimately improve cognitive, behavioral, and social functioning of autistic individuals. Different types of sensory-based treatments include, but are not limited to, auditory integration training (AIT), sound therapy, sensory integration therapy/training (SIT), use of a weighted vest, and music therapy.
