Percutaneous tibial nerve stimulation for the treatment of lower urinary tract dysfunction

Record Status
This is a bibliographic record of a published health technology assessment. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

Authors' objectives
Percutaneous tibial nerve stimulation (PTNS), also known as posterior tibial nerve stimulation, is a minimally invasive form of electrical neuromodulation used to treat overactive bladder (OAB) syndrome and associated symptoms of urinary urgency, urinary frequency, and urge urinary incontinence (UUI).
