
Screening tools to identify adults with cognitive impairment associated with a cerebrovascular accident or traumatic brain injury: diagnostic accuracy

CADTH

Record Status

This is a bibliographic record of a published health technology assessment from a member of INAHTA. No evaluation of the quality of this assessment has been made for the HTA database.

Citation

CADTH. Screening tools to identify adults with cognitive impairment associated with a cerebrovascular accident or traumatic brain injury: diagnostic accuracy. Ottawa: Canadian Agency for Drugs and Technologies in Health (CADTH). Rapid Response: summary of abstracts. 2014

Authors' conclusions

Nine systematic reviews and meta-analyses, and 43 non-randomized studies were identified regarding the diagnostic accuracy of screening tools to identify adults with cognitive impairment associated with dementia. No relevant randomized controlled trials were identified.
